May 14, 2021

Early
registration
deadline:

July 16, 2021

Building on the collaborative research and discussions that were at the center of the 2017 and 2019 meetings, the goal of this symposium is to explore the interface between the nervous and immune systems during development, homeostasis, and disease. The meeting will examine the mediators, mechanisms, and implications of neuro-immune crosstalk in the central and peripheral nervous systems. It will also cover emerging areas such as neuro-immune interactions in plasticity within the brain, complex social behaviors and cancers. This meeting will bring together researchers from across the fields of neuroscience and immunology to facilitate discussion of exciting new concepts and developments in both fields.

Organizers

Gloria Choi, *Massachusetts Institute of Technology, USA*

Henrique Veiga-Fernandes, *Champalimaud Centre for the Unknown, Portugal*

Sam Rose, *Scientific Editor, Neuron*

Kavitha Scranton, *Scientific Editor, Immunity*
