

Poster Program

Poster Session 1

Monday, August 26, 2019 - 13:00–14:30

- [P1.01] **3D imaging and high-content analysis of intact human cerebral organoids**
A. Albanese^{*1}, J. Swaney¹, D.H. Yun¹, N.B. Evans¹, J. Antonucci-Johnson¹, C.H. Sohn¹, V. Pham¹, M. Sur¹, L. Gehrke^{1,2}, K. Chung¹, ¹MIT, USA, ²Harvard Medical School, USA
- [P1.02] **An optimized platform to generate uniform cerebral organoids from human pluripotent stem cells**
A. Sivitilli¹, J. Gosio², J. Hernandez², J. Wrana², L. Attisano^{*1}, ¹University of Toronto, Canada, ²Lunenfeld-Tanenbaum Research Institute, Canada
- [P1.03] **HIV infection alters intestinal stem cell biology**
K. Roesch¹, G. Aviv^{*1}, T. Nguyen¹, Y. Miao², C. Garcia^{2,3}, M. Somsouk⁴, M. Ott^{1,4}, ¹Gladstone Institute, USA, ²Stanford University, USA, ³Howard Hughes Medical Institute, USA, ⁴University of California, USA
- [P1.04] **EpCAM -positive cholangiocyte-derived organoids from a mouse model of chronic cholestatic liver disease are primed for apoptosis**
A. Azad*, S. Bronk, A. Krishnan, T. Katsumi, M-E. Guicciardi, G.J. Gores, Mayo Clinic, USA
- [P1.05] **Bioreactor-assisted self-organization of tubular tissue from spheroids of mixed cell lineages**
K. Baba^{*1}, Y. Sankai^{1,2}, A. Mikhailov^{1,2}, ¹University of Tsukuba, Japan, ²Center for Cybernics Research, Japan
- [P1.06] **Adipose stromal/stem cells spheroids as endochondral ossification templates for bottom-up tissue engineering**
L.S. Baptista^{*1,2}, G.S. Kronemberger^{2,3}, J.M. Granjeiro², ¹Federal University of Rio de Janeiro, Brazil, ²National Institute of Metrology, Quality and Technology, Brazil, ³Unigranrio University, Brazil
- [P1.07] **A fully synthetic 3D in vitro model for pancreatic cancer organoids**
C. Below^{*1,3}, J. Kelly¹, A. Brown², D. Marshall², L. Stockdale^{1,2}, J. Humphries³, N. Hodson³, L. Griffith², M. Humphries³, C. Jorgensen¹, ¹Cancer Research UK Manchester Institute, UK, ²Massachusetts Institute of Technology, USA, ³University of Manchester, UK
- [P1.08] **Establishment of type 2 diabetes mellitus model in Bama Minipigs and detection of TNF- α and IL- β in serum and Gingival tissues**
X. Nong*, D. Teng, B. Wang, W. Li, Hospital and College of Stomatology, Guangxi Medical University, China
- [P1.09] **Engineering developmental organoids for robust symmetry breaking**
M. Bockaj^{*1}, H. Kaul¹, J. Ostblom², H. Ma¹, P.W. Zandstra^{*1,2}, ¹University of British Columbia, Canada, ²University of Toronto, Canada
- [P1.10] **Three dimensional in vitro models for the study of prostate tumour angiogenesis**
A. Jaeschke¹, B. Murekatete¹, C. Werner², G. Risbridger³, D.W. Hutmacher¹, L.J. Bray^{*1}, ¹Queensland University of Technology, Australia, ²Leibniz Institute of Polymer Research Dresden, Germany, ³Monash University, Australia
- [P1.11] **The development of three-dimensional mammary ex vivo cultures using a biomimetic hydrogel**
M. Koch¹, L. Haupt¹, C. Werner², D.W. Hutmacher¹, L.J. Bray^{*1}, ¹Queensland University of Technology, Australia, ²Leibniz Institute of Polymer Research Dresden, Germany
- [P1.12] **Assessing the neuronal output of specific progenitor populations in cerebral organoids via a dual recombinase lineage tracing system**
L. Bury*, S. Fu, U. Mahajan, J. Eum, A. Edwards, A. Wynshaw-Boris, Case Western Reserve University School of Medicine and University Hospitals Cleveland Medical Center, USA
- [P1.13] **Possible molecular mechanism of neurotrophin-3 and vascular endothelial growth factor A in the clinical actions of autologous mesenchymal stem cells evaluated in the hiPCS-derived motor neurons and cerebrospinal fluid of ALS patients**
G. Chadi^{*1}, J.R. Maximino¹, C.J. Alves¹, F.M.H. Jorge¹, P.R.S. Brofman², G. Palmisano¹, A.C. Senegaglia², C.L.K. Rebelatto², ¹Universidade de Sao Paulo, Brazil, ²Pontificia Universidade Catolica do Parana, Brazil
- [P1.14] **Lentiviral engineered endothelial cells vascularize intestinal epithelial organoids, expand intestinal stem cells and augment organoid growth**
M.S. Chaudhry^{*1}, M. Ginsberg², J.M. Butler², J.L.M. Ferrara¹, ¹The Icahn School of Medicine at Mount Sinai Hospital, USA, ²Hackensack University Medical Center, USA
- [P1.15] **The nuts and bolts of NIH peer review - Center for scientific review**
T. Cohen, Center for Scientific Review, USA

- [P1.16] Engraftment optimization and therapeutic evaluation of HA-iPSC derived endothelial cells for hemophilia A treatment**
K. Conroy^{*1,2}, J. Nolta^{2,1}, A. Wang^{2,1}, P. Zhou^{2,1}, ¹California State University, USA, ²University of California, Davis, USA
- [P1.17] Establishment of new patient-derived tumoroids to model pediatric neuroblastoma**
D. Corallo^{*1}, M. Pantile¹, C. Zanon¹, A. Zin¹, R. Noguera², E. Viscardi³, S. Aveic^{1,4}, ¹Fondazione Istituto di Ricerca Pediatrica Città della Speranza, Italy, ²University of Valencia-INCLIVA/CIBERONC, Spain, ³University Hospital, Italy, ⁴RWTH Aachen University Hospital, Germany
- [P1.18] Development of a 3D-cell based high content screening platform for BRAF-mutant colorectal human tumors**
E. Courtois*, E. Jocoy, M. Cheng, K. Draheim, S. Bessonett, S. Airhart, M. Samuels, P. Robson, The Jackson Laboratory, USA
- [P1.19] In-vitro modeling of human embryonic brain structures through optogenetic induction of polarizing signals**
R. De Santis*, F. Etoc, A.H. Brivanlou, The Rockefeller University, USA
- [P1.20] Comparing 2-D and 3-D models of hepatotoxicity: Liver organoids, HepG2 spheroids, and iPSC-derived hepatocytes using MTT and DNA comet assays**
S. Degese*, S. Tousey, D. Galitz, M. Pundt, X. Yu, M. Anderson, G. Herr, J. Van Etten, C. Munshi, K. Flynn, Bio-Techne, USA
- [P1.21] Using brain organoids to uncover the neurobiology of speech and language-related disorders**
J. den Hoed^{*1}, M.M.K. Wong¹, M. Heide², W.B. Huttner², S.E. Fisher^{1,3}, ¹Max Planck Institute for Psycholinguistics, The Netherlands, ²Max Planck Institute of Molecular Cell Biology and Genetics, Germany, ³Donders Institute for Brain, Cognition and Behaviour, The Netherlands
- [P1.22] A three-dimensional stereolithographic approach enables self-organization of biliary cells into pre-defined luminal structures**
E. Mazari-Arribalzaga¹, D. Ayollo¹, P. Dupuis-Williams^{*2,3}, A. Fuchs¹, F. Chatelain¹, ¹CEA/DRF, UMR-S1160 Hôpital Saint-Louis, France, ²UMR-S1174 INSERM/Université Paris Saclay, France, ³ESPCI, Paris, France
- [P1.23] Shaping 3D bile ducts from micropatterned surfaces by self-organogenesis**
E. Gontran¹, L. Bouzhir¹, A. Fuchs², P. Dupuis-Williams^{*1,3}, ¹UMR-S1174 INSERM/Université Paris Saclay, France, ²CEA/DRF, UMR-S1160 Hôpital Saint-Louis, France, ³ESPCI, Paris, France
- [P1.24] Efficacy of olaparib treatment in colorectal cancer preclinical models**
E. Durinkova^{*1}, P. Arcella¹, G. Corti¹, L. Lazzari^{1,2}, N. Reilly¹, M. Montone¹, S. Siena^{3,4}, F. Di Nicolantonio^{1,2}, A. Bardelli^{1,2}, S. Arena^{1,2}, ¹Candiolo Cancer Institute, Italy, ²University of Torino, Italy, ³Niguarda Cancer Center, Italy, ⁴Università degli Studi di Milano, Italy
- [P1.25] Kidney organoid reproducibility across multiple human iPSC lines and diminished off target cells after transplantation revealed by single cell transcriptomics**
M. Emani^{*1}, A. Subramanian¹, E. Sidhom^{1,2}, N. Sahakian¹, K. Vernon¹, Y. Zhou¹, J. Marshall¹, O. Rozenblatt-Rosen¹, A. Regev¹, A. Greka^{1,2}, ¹Broad Institute of MIT and Harvard, USA, ²Brigham and Women's Hospital and Harvard Medical School, USA
- [P1.26] Generation of cerebral organoids for the investigation of dynein-dependent brain malformations**
S. Farcy^{*2,1}, A. Di Cicco¹, L. Coquand¹, A. Baffet¹, N. Bahi-Buisson², ¹Institut Curie, France, ²Institut Imagine, France
- [P1.27] 3D Organoids unravel critical pathways into prostate tissue homeostasis and tumorigenesis**
V. Foletto*, F. Cambuli, D. De Felice, M.D. Palumbieri, M. Zaffagni, S. Genovesi, A. Bertossi, M. Lorenzoni, A. Alaimo, E. Bertossio, University of Trento, Italy
- [P1.28] A 3D bioprinted vascularized omentum model for ovarian cancer metastasis**
J. Fu^{*1}, H. Kenny², E. Lengyel², M. Ferrer¹, M.J. Song¹, ¹National Center for Advancing Translational Sciences, NIH, USA, ²The University of Chicago, USA
- [P1.29] WITHDRAWN**
- [P1.30] WITHDRAWN**
- [P1.31] Modeling human hematopoietic stem cell dynamics through bone marrow organoids**
S. Giger^{*1}, S. Hoehnel¹, M. Ehrbar², M. Lutolf¹, ¹École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, ²University Hospital Zurich, Switzerland
- [P1.32] High-throughput 3D gene editing platforms for rapid discovery of novel anticancer drug resistance**
T.S.P. Grandhi*, J. To, S. Hormann, Genomic Institute of Novartis Research Foundation, USA
- [P1.33] Biowire™ II engineered human cardiac tissues have adult-like responses to inotropic agents**
M.P. Graziano^{*1}, N. Feric¹, K. Chaudary², I. Pallotta¹, R. Singh¹, D. Bogdanowicz¹, M. Gustilo¹, M. Ushio¹, R. Aschar-Sobbi¹, ¹TARA Biosystems Inc, USA, ²GlaxoSmithKline, USA

- [P1.34] **Development of an organoid model for malaria-related brain injury**
A. Harbuzariu*, S. Pitts, J. Cespedes, A. Nti, K. Harp, A. Shaw, M. Liu, J.K. Stiles, Morehouse School of Medicine, USA
- [P1.35] **Self-organizing human neuruloids show ectodermal lineage diversification and allow modeling of human diseases**
T. Haremak*, J. Metzger, T. Rito, Z. Ozair, F. Etoc, A. Brivanlou, Rockefeller University, USA
- [P1.36] **Creating a nephro-vascular unit Ex Vivo from human pluripotent stem cells**
K. Hariharan*, B. Kurtze, S. Oh, N. Beindorff, A. Kurtz, Charité - Universitätsmedizin Berlin, Germany
- [P1.37] **Development of a 3D coculture model for investigating interactions between endothelial cells and organoid of intrahepatic cholangiocarcinoma in a microfluidic device**
K. Hidaka*, T. Yamashita, T. Muramatsu, Y. Saito, H. Saito, R. Sudo, Keio University, Japan
- [P1.38] **Bioprinted pluripotent stem cell-derived kidney organoids provide opportunities for high content screening**
W. Higgins*¹, A. Chambon¹, K. Bishard¹, P. Er², K. Lawlor², J. Vanslambrouck², S. Howden², B. Shepherd¹, A. Chen¹, M. Little^{2,3}, ¹Organovo, USA, ²Murdoch Children's Research Institute, Australia, ³University of Melbourne, Australia
- [P1.39] **Alveolar organoids derived from human pluripotent stem cells as a model system for studying idiopathic pulmonary disease**
H.R. Heo¹, J.H. Kim¹, J.Y. Kim¹, K.S. Kim², D.R. Lee³, S.H. Hong*¹, ¹Kangwon National University, Republic of Korea, ²Hanyang University, Republic of Korea, ³CHA University, Republic of Korea
- [P1.40] **A screenable model for the enhancement of anti-tumor T-cell function**
S. Horman*, J. To, J. Hoerter, GNF-Novartis, USA
- [P1.41] **Activated PI3K disrupts tissue architecture in human breast organoids by inducing changes in interfacial mechanics**
J. Hu*¹, V. Srivastava², J. Garbe^{4,2}, M. Stampfer⁴, M. Labarge³, Z. Gartner^{2,5}, ¹UC Berkeley-UC San Francisco Bioengineering, USA, ²University of California San Francisco, USA, ³City of Hope Cancer Center, USA, ⁴Lawrence Berkeley National Laboratory, USA, ⁵Chan-Zuckerberg Biohub, USA
- [P1.42] **Modeling Wnt/β-catenin activated tissue repair using lung organoid**
Y. Hu*¹, J-P. Ng-Blichfeldt^{2,3}, W. Ren¹, C. Ciminieri^{1,3}, C. Ota³, P.S. Hiemstra⁴, J. Stolk⁴, R. Gosens², M. Königshoff¹, ¹University of Colorado, USA, ²Ludwig-Maximilians University, University Hospital Grosshadern, Germany, ³Groningen Research Institute for Asthma and COPD (GRIAC), University of Groningen, The Netherlands, ⁴Leiden University Medical Center, The Netherlands
- [P1.43] **Shape-shifting tissue scaffolds for synthetic mimicry of kidney organogenesis**
A. Hughes, University of Pennsylvania, USA
- [P1.44] **Relaxation of extracellular matrix forces directs crypt architecture in intestinal organoids**
E. Hushka*^{1,2}, F. Yavitt^{1,2}, K. Anseth^{1,2}, ¹University of Colorado Boulder, USA, ²Biofrontiers Institute, USA
- [P1.45] **Plexin-B2 mediates biochemical-mechanical integration during multicellular organization and is associated with accelerated dopaminergic neuronal differentiation**
C. Junqueira Alves*, R. Darioli, T. Hannah, R. Wiener, N. Daviaud, R. Tejero, N. Tsankova, E. Azeloglu, R. Friedel, H. Zou, Icahn School of Medicine at Mount Sinai, USA
- [P1.46] **Laminin-functionalized 3D silk scaffold maintains expansion, stemness and differentiation potential of human pluripotent stem cells**
Z. Xiao, B. Eleuteri, T. Kalluri*, BioLamina, Sweden
- [P1.47] **Development of a microglia-cerebral organoid system using iPSCs**
K. Kalpana*, M. Nijsure, I. Kruglikov, A. Domenico, G. Croft, S. Noggle, V. Fossati, New York Stem Cell Foundation, USA
- [P1.48] **Two-way control of non-muscle myosin light chain activity plays a crucial role in epithelial cell sheet**
Y. Kasai*, T. Morino, K. Yamamoto, H. Kojima, Jikei University School of Medicine, Japan
- [P1.49] **Optimized 3D liver model for drug metabolism and toxicity assessment**
M. Kennedy*, M. Millett, M. Connolly, J.M. Silva, D. Kuninger, Thermo Fisher Scientific, USA
- [P1.50] **In vitro long-term expansion of mouse dental Epithelial organoids**
H-Y. Kim*, H-S. Jung, Yonsei University, Republic of Korea
- [P1.51] **A transepithelial morphogen gradient and flow-dependent physical cue control the in vitro intestinal 3D morphogenesis in a microengineered human gut-on-a-chip**
W. Shin, H.J. Kim*, UT Austin, BME, USA
- [P1.52] **Liver organoids generation from human pluripotent stem cells**
J.H. Kim*, H.S. Lee, D.W. Han, Konkuk University, Republic of Korea
- [P1.53] **WITHDRAWN**

- [P1.54] Targeting M cells in organoids; an organoid-based model for the quantitative evaluation of uptake of modified nanoparticles in the small intestine**
A. Klisuric^{*1}, Y. Bar-Ephraim², R. Gibson¹, B. Thierry¹, H. Clevers², ¹University of South Australia, Australia, ²Hubrecht Institute, The Netherlands
- [P1.55] Targeting myeloid-derived suppressor cells for gastric cancer immunotherapy**
V. Koh^{*1}, J. Chakrabarti², S.L. Chan³, J. Wang², S. Ahmed², Y. Ito^{3,4}, J. So^{1,4}, W.P. Yong^{1,3}, Y. Zavros², ¹National University Health System, Singapore, ²University of Cincinnati, USA, ³Cancer Science Institute of Singapore, Singapore, ⁴National University of Singapore, Singapore
- [P1.56] Organ-wide vessel segmentation using VessAP technology in DISCO-cleared mouse pancreas**
Z.I. Kolabas^{*1,2}, M.I. Todorov^{1,2}, K. Stanic^{1,2}, A. Erturk^{1,2}, ¹Klinikum der Universität München Institut für Schlaganfall- und Demenzforschung, Germany, ²Helmholtz Zentrum München, Germany
- [P1.57] WITHDRAWN**
- [P1.58] CRISPR-pass: Gene rescue of nonsense mutations using adenine base editors**
C.I. Lee^{*1}, D.H. Jo², G.H. Hwang³, J.H. Yu³, J.H. Kim², S.E. Park³, J.S. Kim¹, J.H. Kim², S. Bae³, ¹Seoul National University, Republic of Korea, ²Seoul National University Hospital, Republic of Korea, ³Hanyang University, Republic of Korea
- [P1.59] iPSC-Derived kidney organoids recapitulate renal manifestations of tuberous sclerosis complex**
J.O.H. Hernandez Ramos¹, M.F. Sobral Reyes¹, M. Sundberg^{2,3}, M. Sahin^{2,3}, D.R. Lemos^{*1,3}, ¹Brigham and Women's Hospital, USA, ²Boston Children's Hospital, USA, ³Harvard Medical School, USA
- [P1.60] 3D Liver Microtissues bridge applications from drug-induced liver injury (DILI) to low-clearance in ADME seamlessly**
O. Frey, R. Kostadinova, P. Guye, J. Lichtenberg*, InSphero AG, Switzerland
- [P1.61] PDX-derived 3D tumor microtissues as ex-vivo human experimental models for evaluating therapeutic responses**
F. Chiovaro¹, I. Agarkova¹, N. Buschmann¹, C. Pichon¹, T. Langova¹, A. Maier², J. Schueler², P. Guye¹, J. Lichtenberg^{*1}, ¹InSphero AG, Switzerland, ²Charles River DRS Germany GmbH, Germany
- [P1.62] Co-culture system for studying immune based therapies in patient derived pancreatic ductal adenocarcinoma organoids**
E. Lim*, C. Cruz, K. Yu, Memorial Sloan Kettering Cancer Center, USA
- [P1.63] Developing IPSC derived human neuronal cell model for Mucopolysaccharidosis IIID**
G. Lopez*, K. Cheng, S. Li, F. Wang, T. Chou, LA Biomed, USA
- [P1.64] Pro-tumorigenic role of ETS-related gene (ERG) in pre-cancerous prostate lesions**
M. Lorenzoni¹, A. Alaimo¹, F. Cambuli¹, V. Foletto¹, S. Genovesi¹, M. Zaffagni¹, D. De Felice¹, A. Bertossi¹, A. Romanelli¹, M. Barbareschi², A. Lunardi^{*1}, ¹University of Trento, Italy, ²Santa Chiara Hospital, Trento, Italy
- [P1.65] A human ips cell model of centrosomal defects reveals new molecular mechanisms for deafness**
A. Czajkowski¹, A. Mounier¹, B. Mughal¹, B. Grobarczyk¹, G. Milan², P.P. Lefebvre^{1,3}, L. Nguyen¹, L. Delacroix¹, B. Malgrange^{*1}, ¹University of Liège, Belgium, ²University of Padua, Italy, ³CHU de Liège, Belgium
- [P1.66] Single cell characterization of patient-derived human primary prostate epithelial cell organoids**
T. McCray*, L. Nonn, University of Illinois at Chicago, USA
- [P1.67] Rationally-enriched intestinal organoid screening uncovers nuclear export mediated stem cell fate decisions**
B. Mead^{*1,2}, K. Hattori³, J. Ordovas-Montanes^{1,2}, L. Levy^{1,3}, M. Vukovic^{1,2}, D. Sze³, R. Langer¹, J. Karp^{1,3}, A. Shalek^{1,2}, ¹Massachusetts Institute of Technology, USA, ²MGH Ragon Institute & Broad Institute, USA, ³Brigham & Women's Hospital, USA
- [P1.68] High-throughput microfluidic platform for vascularization of three-dimensional tissues**
R. Menon, S. Previdi, H. Lanz, A. Nicolas, F. Schavemaker, S. Trietsch, D. Kurek*, P. Vullo, Mimetas Organ-on-a-Chip Company, The Netherlands
- [P1.69] Hepatitis C virus (HCV) infects and perturbs liver stem cells**
N. Meyers^{*1,3}, A. Erickson², C. Simoneau¹, M. Khalid^{1,4}, V. Natarajan¹, T. Mahmoudi⁴, J. Baron³, S. Cooper², T. McDevitt¹, M. Ott^{1,3}, ¹Gladstone Institutes, USA, ²California Pacific Medical Center, USA, ³University of California San Francisco, USA, ⁴Erasmus University Medical Center, The Netherlands
- [P1.70] Oct1 regulates transcription of a new milk protein as1-casein in stress response**
Z.Y. Min*, Y. Yu, Peking University Third Hospital, China
- [P1.71] Multi-system organoid models of SATB2-associated disorders**
F. Mirakhori, University of Maryland, USA
- [P1.72] WITHDRAWN**

- [P1.73] Non-small cell lung cancer modelling using patient-derived organoids**
V. Monica^{*1,2}, G. Chiaverina^{1,2}, L. Primo^{1,2}, ¹Candiolo Cancer Institute, Italy, ²University of Torino, Italy
- [P1.74] The celiac mucosal barrier-on-chip to investigate its role in initiation of celiac disease**
J. Mooiweer^{*1}, R. Moerkens¹, J. Slager¹, A. Ramirez¹, K. Le¹, C. Wijmenga^{1,2}, R. Barrett³, S. Withoff¹, ¹University Medical Center Groningen, University of Groningen, The Netherlands, ²K.G. Jebsen Coeliac Disease Research Centre, Department of Immunology, University of Oslo, Norway, ³Cedars-Sinai Medical Center, USA
- [P1.75] Synthetic genetic circuits to control stem cell programs in tissue assembly**
A. March, M. Santorelli, C. Lam, V. Fitts, L. Morsut*, University of Southern California, USA
- [P1.76] Developing models that replicate cephalic arch geometry and flow conditions in dialysis patients with end-stage renal disease to understand and predict access thrombosis**
A. Moya-Rodríguez*, C. Bernstein, M. Hammes, A. Basu, University of Chicago, USA
- [P1.77] 3D bio-printed vascularized human skin as a novel drug screening assay platform for atopic dermatitis**
X. Liu*, S. Michael, M. Ferrer, M.J. Song, NIH, Vanuatu
- [P1.78] Tracheal organoid including cartilage and smooth muscle**
K. Kishimoto, M. Morimoto*, RIKEN BDR, Japan
- [P1.79] Brain organoids as a model to decipher autism spectrum disorder in Qatari population**
N. P. Abdul Manaph*, S. Ltaief, A. R. Al-Shammari, S. Khattak, Qatar Biomedical Research Institute, Qatar
- [P1.80] Development of 3D Scaffolds to Study Bile Duct Morphogenesis**
A. Funfak^{*1}, L. Bouzhir², E. Gontran², N. Minier¹, P. Dupuis-Williams^{2,3}, S. Gobaa¹, ¹Institut Pasteur, France, ²Institut National de la Santé et de la Recherche Médicale (INSERM), France, ³École Supérieure de Physique et de Chimie Industrielles de la Ville de Paris (ESPCI), France
- [P1.81] Cytokine-triggered STAT5 action promotes metastasis through high colonic cancer stem cell activity**
H.F. Li², R.X. Liu², J. Cai², R. Moriggl³, X.N. Han^{*1}, ¹Cincinnati Children's Hospital Medical Center (CCHMC), USA, ²Chinese Academy Institute of Medical Sciences (CAMS) and Peking Union Medical College (PUMC), China, ³University of Vienna, Austria
- [P1.82] Development of a human Colon Intestine-Chip to study colonic mucosa development and functionality**
A. Apostolou^{*1,2}, R. Luc², R. Panchakshari³, A. Banerjee³, M.D. Paraskevopoulou³, D. Manatakis², E. Manolakos^{1,4}, G. Hamilton², C. Giallourakis³, K. Karalis², ¹National and Kapodistrian University of Athens, Greece, ²Emulate Inc., USA, ³Takeda Pharmaceutical Company Ltd., USA, ⁴Northeastern University, USA
- [P1.83] Tumor spheroid-on-a-chip: A standardized microfluidics platform for investigating tumor angiogenesis**
J. Ko, J. Ahn, S. Kim, J. Lee, N.L. Jeon*, Seoul National University, Republic of Korea
- [P1.84] 3D Models of Hepatocellular Carcinoma to Study Combinations of Angiogenesis Inhibitors with Radiation Treatment**
S. Znati^{*1,2}, R. Carter¹, M. Vasquez Duran¹, H. Shahbakhti¹, A. Westhorpe¹, C. De Vellis¹, J. Prince⁴, M. Loizidou^{1,2}, R. Sharma^{1,3}, ¹University College London, UK, ²Royal Free Hospital, UK, ³University College London Hospital, UK, ⁴Oxford University, UK
- [P1.85] Disease modeling of carcinogenesis using lung organoid generated from pluripotent stem cells**
A. Miura*, D. Yamada, I. Tosa, K. Suzawa, H. Yamamoto, S. Toyooka, T. Takarada, Okayama university, Japan
- [P1.86] The development of a model for the human neuromuscular junction**
J. Sanchez*, E. Solomon, K. Davis-Anderson, S. Micheva-Viteva, R. Iyer, S. Twary, Los Alamos National Laboratory, USA
- [PT1.01] Intestinal mesenchymal signals guide regional identity**
M. Maimets^{*1}, M.T. Pedersen¹, M. Thodberg³, J. Guiu¹, A. Sandelin³, K. Jensen^{1,2}, ¹BRIC, University of Copenhagen, Denmark, ²Novo Nordisk Foundation Center for Stem Cell Research, Denmark, ³The Bioinformatic Center, University of Copenhagen, Denmark
- [PT1.02] Engineering innervated human gastric organoids to study the development and physiology of the gastric enteric nervous system**
A.K. Eicher^{*1,2}, H.M. Berns², N. Sundaram², L.E. Haines², M.A. Helmrath², J.M. Wells², ¹University of Cincinnati, USA, ²Cincinnati Children's Hospital Medical Center, USA
- [PT1.03] IL-1 and TNF α contribute to the inflammatory niche to enhance lung regeneration after flu infection**
H. Katsura*, Y. Kobayashi, P.R. Tata, B.L.M. Hogan, Duke University, USA

- [PT1.04] A platform for generation of chamber-specific cardiac tissues and disease modelling**
Y. Zhao^{*1}, N. Rafatian¹, N. Feric^{1,3}, B.J. Cox¹, R. Aschar-Sobbi^{1,3}, E.Y. Wang¹, P. Aggarwal⁴, B. Zhang¹, G. Conant¹, K. Ronaldson-Bouchard^{3,5}, ¹University of Toronto, Canada, ⁴Medical College of Wisconsin, USA, ⁵Columbia University, USA
- [PT1.05] Fast and efficient generation of knock-in human organoids using homology-independent CRISPR/Cas9 precision gene editing**
D. Hendriks¹, B. Artegiani¹, J. Beumer^{*1}, R. Kok², I. Joore¹, X. Zheng², S. Tans², J. van Zon², H. Clevers^{1,3}, ¹Hubrecht Institute, The Netherlands, ²FOM Institute AMOLF, The Netherlands, ³The Princess Maxima Center for Pediatric Oncology, The Netherlands
- [PT1.06] Synthetic hydrogels identify matrix biochemical and mechanical properties required for renal epithelial cell tubulogenesis**
A. Mulero-Russe^{*1}, R. Cruz-Acuña¹, A. Clark¹, R. Zent², A. García¹, ¹Georgia Institute of Technology, USA, ²Vanderbilt University, USA
- [PT1.07] Mechanical forces lead to wrinkling of human brain organoids**
E. Karzbrun^{*1}, O. Reiner², ¹KITP, UCSB, USA, ²Weizmann Institute of Science, Israel
- [PT1.08] Controlled hydrogel photodegradation improves colony formation of intestinal organoids**
M. Yavitt^{*1,2}, T. Brown^{1,2}, E. Hushka^{1,2}, K. Anseth^{1,2}, ¹University of Colorado Boulder, USA, ²The BioFrontiers Institute, USA
- [ST05] Bioengineered 3-dimensional lung organoid: A clinically relevant *in vitro* model for small cell lung cancer**
C. Sen*, D. Wilkinson, L. Meneses, D. Shia, P. Vijayaraj, A. Purakayastha, T. Rickabaugh, B. Dunn, B. Gomperts, University of California, Los Angeles, USA
- [ST07] Organoid cultures reveal distinct genetic profile of early-onset colorectal cancer enriched for the serrated neoplasia pathway**
H.H.N. Yan^{*1}, H.C. Siu¹, S.L. Ho¹, S.S.K. Yue¹, W.Y. Tsui¹, D. Chan¹, S.T. Yuen¹, H. Clevers^{2,3}, W.L. Law¹, S.Y. Leung¹, ¹The University of Hong Kong, Hong Kong, ²University Medical Centre Utrecht, The Netherlands, ³Princess Maxima Center for Pediatric Oncology, The Netherlands
- [ST08] Generation of lactocyte-rich alveolar organoids from human breast milk**
B. Goods*, B. Mead, S. Nyquist, K. Kolb, A. Shalek, Massachusetts Institute of Technology, USA
- [ST09] Stem cell derived human pancreatic organoids for studying early lesions of pancreatic cancer**
L. Huang*, R. Desai, D. Melton, S. Muthuswamy, Harvard University, USA

Poster Session 2

Tuesday, August 27, 2019 - 11:55–13:30

- [P2.01] Modeling neurodegenerative diseases using iPSC derived cells and brain organoids**
A. Mukherjee*, E. Armijo, C. Gonzalez, X. Diao, M. Chavez, M. Shahnawaz, C. Soto, University of Texas Health Science Center at Houston, USA
- [P2.02] Establishment of functional immune cells in human pluripotent stem cell-derived colonic organoid cultures**
J.O. Munera^{*1}, C. Bouffi², J.M. Wells², ¹Medical University of South Carolina, USA, ²Cincinnati Childrens Hospital Medical Center, USA
- [P2.03] Culture of human intestinal organoids in a serum- and conditioned medium-free formulation**
R. Mustata-Micsik^{*1}, J. Horcas¹, M. Lankhorst², R.K. Conder², W. Chang¹, T.E. Thomas², A.C. Eaves^{2,3}, S.A. Louis², ¹STEMCELL Technologies UK Ltd., UK, ²STEMCELL Technologies Inc., Canada, ³Terry Fox Laboratory, BC Cancer Agency, Canada
- [P2.04] A long-term organoid model of the adult mouse kidney**
A. Myszczyszyn*, W. Birchmeier, A. Fendler, Max Delbrück Center for Molecular Medicine in the Helmholtz Association (MDC), Germany
- [P2.05] Modeling lung adenocarcinoma using alveolar organoids**
S. Naranjo*, A. Tang, T. Jacks, MIT, USA
- [P2.06] Tumor microenvironment-dependent endothelial cell heterogeneity is regulated by matricellular protein SPARCL1 in human colorectal carcinoma**
E. Naschberger^{*1}, C. Tenkerian¹, D. Regensburger¹, A. Ramming¹, B. Schmid³, V.S. Meniel², N. Britzen-Laurent¹, V.S. Schellerer¹, M. Stürzl¹, ¹University Medical Center Erlangen, Germany, ²European Cancer Research Institute Cardiff, UK, ³Friedrich-Alexander-University Erlangen-Nuremberg, Germany
